

Tallinn, June 2018

Dear FMD-stakeholders!

We are pleased to announce that on 28th of June, the Estonian Medicines Verification System (EtMVS) was connected to the European HB production environment.

Successful implementation of EtMVS was completed in collaboration with other NMVO's, ARVATO and with support by the EMVO team. Furthermore, with the excellent support of the REKS Board members, who continuously worked on this project over the last two years.

As next steps, REKS will execute the phase of EtMVS project with participants ready to onboard to the EU Hub and with end-users ready to connect to the national system.

We kindly ask manufacturers and OBP's to start uploading product and pack data (products for the Estonian market) to the EU Hub as soon as possible to support the common success of the project.

For further information about EtMVS – Estonian Medicines Verification System, please visit our website www.reks.ee or contact us by email (info@reks.ee).

With kind regards,

Raul Mill

General Manager
